Pencil, ____ minutes.

[WHAT I HOPE TO IMPROVE ON]

[THE METHOD]

Watch the portrait drawing tutorials by Daniel Burge (@danielburgeart) and Will Davies (@willdaviesart) on Instagram.

On each practice page, follow the steps below over the faded image to practice measuring. Then measure and draw it freehand on the blank sheet. On the feature pages, use the steps that fit.

LESSON 1 · THE BLOCK-IN

1. Mark the top of the head and the chin, then draw the outline with as few long straight lines as you can. Check each angle against the background shape around the head.
2. Draw the darkest areas, such as the hair, as simple straight-edged shapes. Check that each shape meets the outline where it does on the reference.
3. Shade those shapes with one flat, even tone, and leave the lit areas as bare paper.
4. Draw a light line across the face for the eyes, usually about halfway between the top of the head and the chin. Check its height against the reference.
5. Draw light lines for the brows and the base of the nose, which usually split the hairline-to-chin length into thirds. Check both against the reference.
6. Draw the nose as a wedge of straight lines, and each eye and the mouth as a straight line. Check each angle against the reference.
7. Mark the bottom of the lower lip, usually about halfway between the base of the nose and the chin.
8. Draw straight up-and-down lines from the corners of the eyes. Check that they meet the nostrils and the mouth corners where they do on the reference.
9. Draw each upper lid as a curve, with the iris as a circle tucked partly under it. Check the whole drawing against the reference once more.

LESSON 2 · THE LIKENESS

1. Break each straight line into shorter lines that follow the edges of the face and features more closely.
2. Take your time here, because the likeness depends on these lines more than on the shading.
3. Work from big shapes to small ones, checking each line's angle and length against the reference.
4. Compare the shapes of the eyes, nose and mouth, and the spaces between them, with the reference.
5. If it doesn't look like the person yet, move a feature slightly and check again.
6. Shade the shadow shapes lightly with an HB pencil, then build up the midtones, checking each value against the reference.
7. Once the midtones are in, go darker with a 2B or 4B until each value matches the reference.
8. Smooth the graphite with a folded tissue, since a finger leaves oil that makes erasing hard.
9. Press a kneaded eraser onto the lightest spots to lift graphite back out for the highlights.
10. Shade the background lightly so the face sits against a tone, keeping it lighter than the darkest shadows.

Pencil, ____ minutes.

[WHAT I'LL FOCUS ON NEXT]

IN THIS NOTEBOOK

This notebook has 36 practice pages, each with its own photo. It starts with noses, lips, ears and eyes and ends with full portraits. Under each photo, the left sheet has a faded image of the reference, for practicing measuring. The right sheet is blank, for measuring and drawing it freehand. The notebook opens and closes with the same portrait, so you can compare your first drawing with your last.

40 PAGES · 89 × 124 MM · STAPLE-BOUND
